DETAILED ACTION

Election/Restrictions

Restriction to one of the following inventions is required under 35 U.S.C. 121:

- I. Claims 1-11 are drawn to a micro granulometry apparatus comprising a sonic source and sonic receiver, classified in class 73 subclass 635.
- II. Claims 12-17 are drawn to process for measuring a microgranulometry, classified in class 73, subclass 599.

The inventions are distinct, each from the other because of the following reasons:

Inventions Group I and Group II are related as process and apparatus for its practice. The inventions are distinct if it can be shown that either: (1) the process as claimed can be practiced by another materially different apparatus or by hand, or (2) the apparatus as claimed can be used to practice another and materially different process. (MPEP § 806.05(e)). In this case group II does not require the rolling holders, gamma source, sonic source, gamma receiver or sonic receiver of group I to measure the properties of the sample. Group II may use a scale to measure the weight of the sample in the tube.
